Tris Buffered Saline (TBS) pH 7.6 and 8.0

Features
- Isotonic, non-toxic buffer
- Choice of 1x or 10x concentration
- Guaranteed reproducibility
- Ready to use in minutes
- Save space in stock rooms

Product description
Tris Buffered Saline TBS is isotonic and non-toxic to cells and is suitable for molecular biology. The buffer is commonly used as substance diluent or as wash buffer in immunoassays such as ELISA. It is used in immuno-histochemical staining when the background is high and for diluting alkaline phosphatase or peroxidase conjugated antibodies in Western blotting.

Medicago’s TBS buffer is supplied as pre-weighed tablets in bottles and in blister packs or as exactly pre-weighed powder in sealed pouches. One tablet or the contents of one pouch yields 500 ml or 1000 ml of buffer solution in the compositions:

1. 1 x solution; 0.05 M Tris buffered saline, 0.138 M sodium chloride, 0.0027 M potassium chloride with pH 8.0 at 25°C.
2. 10 x solution; 0.5 M Tris buffered saline, 1.38 M sodium chloride, 0.027 M potassium chloride with pH 8.0 at 25°C.
3. 1 x solution; 0.05 M Tris-HCl buffer, 0.15 M sodium chloride with pH 7.6 at 25°C.

Applications
- Wash buffer in immunoassays
- Antibody diluent in Western blotting
- Sample diluent in in vitro diagnostics
- Immuno-histochemical staining
- In Situ hybridization

Directions for use
Empty one pouch in a laboratory flask or beaker placed on a magnetic stirrer. Add deionized water and stir until full dissolution. Adjust the volume up to 1000 ml and the buffer is ready to use.
For tablets, dissolve one tablet in 500 ml of deionized water. Stir until full dissolution and the buffer is ready to use.

Shipping and storage
TBS buffer is shipped at room temperature. Store the tablets and pouches in a dry place at room temperature. Shelf life is three years.

Tips and hints
If the tablet or the contents of the pouch is not properly dissolved, make sure:
- the water temperature is 22-25°C
- the buffer is properly stirred
- high quality deionized water is used

Sterilization can be performed by filtration or autoclaving. Filter the buffer solution into a sterile flask through a 0.22 µm filter.

Certifications
Medicago’s laboratories and manufacturing site in Uppsala are ISO 9001:2008 and ISO 13485:2012 certified. Each stage of the manufacturing process is controlled and monitored by stringent quality control procedures to guarantee the highest possible quality and lot-to-lot reproducibility.
